Titles

The next ten years — Tribology's task 34
Economic aspects of tribology in the U.K. 34
Ten years of Tribology in Australia 35
The Japanese scene 37
Tribology in America 38
Tribology research in Russia 39
Tribology in Czechoslovakia 41
A look at Western Europe 42
Contact, friction and wear 4
Lubricants and lubrication 10
Machines and components 19
Condition monitoring 29
Chemical conversion coatings of metals to resist scuffing and wear 105
Consistency tests for published data on the stliffners characteristics of journal bearings 325
Cylinder linear wear in low speed diesel engines 267
Design procedures for orifice compensated gas journal bearings based on experimental data 63
Do convective inertia forces affect turbulent bearing characteristics? 249
Electroplated coatings for wear resistance 113
The four step porous bearing 330
Gear couplings for high powers and speeds 49
Hardfacing 129
The influence of oxides on the friction and wear of alloys 211
The interaction between corrosion inhibitors and load carrying additives in mineral oil 185
An interferometric study of lubricated rotary face seals 219
An introduction to reinforced thermoset bearings 177
Laser heat treatment 139
Load carrying activities of some hydroxy compounds and their ester derivatives 280
Lubrication of nuclear reactor components — friction systems in liquid sodium and argon 320
Mechanism of action of VI improvers 189
The mechanisms of wear 91
A new method for assessing the lubricating ability of two-stroke engine oil 243
Percussive impact wear — a study of repetitively impacting solid components in engineering 169
Permeability distribution in sintered bearings 333
Phosphorescent tracer method to measure velocity profiles in fluid film lubrication 182
Polymeric coatings 145
Practical problems in using water mix cutting fluids when machining cast iron 337
A re-examination of the four-ball test 59
Selection of materials for tribotechnical applications — the role of tribometry 233
Selection of surfacing treatments 97
Simulating contact conditions in dry bearings 295
A solution to the thermohydrodynamic problem in laminar flow bearings 302
Some problems in the tribology of rough surfaces 163
Sprayed coatings for piston rings 119
Stimulating angular ball bearing lubricated elliptical contacts — film thickness and traction measurements 273
Surface hardening 121
Testing abrasion resistance of slurry pipeline materials 289
Testing alloys for use in heat treatment furnaces 193
Theoretical and experimental analysis of an externally pressurised porous gas thrust bearing 285
The unacceptable face of lubricating oil additives 318
The use of a replica technique to study wear 241
Vapour deposition of wear-resistant surfaces 135
Wear technology and its realisation 43

Casebook

Polyimide seal ousts steel 254
Rolling mill bearing problem solved 199
